

# Accredited Isolator Installer

We supply and install isolation switches between the meter and consumer unit on single and three phase installations to allow your electrical team to safely carry out planned and emergency downstream maintenance and upgrades.

Only accredited and registered **Safe Isolation Providers (SIPs)** are authorised to undertake this work. Installing an isolator means you can carry out work on your property at any time without the need for the Network Owner to come to the property to switch off supply.

We specialise in services for housing associations, landlords, electrical maintenance contractors, property owners and commercial estates.

## Why work with us?

**End to end project management:** Our service includes all tenant liaison and scheduling.

**Safety Reports:** We provide you with reports and remedial advice on any unsafe installations.

**Communication:** We manage all industry communications and approvals with the Network Owner and Meter Operator.

**Nationwide Coverage:** Our team of qualified installers are nationwide, providing full coverage of the UK.

**Dedicated Project Manager:** We provide a dedicated project manager for each isolation installation project.
