

EV charging solutions

**Helping your business navigate
the electric vehicle transition**

Whatever your organisation type or charging requirement, our independent EV charging solutions put your business requirements in the driving seat.

Charge ahead with our EV chargepoint solutions

Our innovate approach is helping to lower the cost of charging regardless of location. With accurate reporting around availability, charging, billing, vehicle locations and a software solution that is simple and easy to use, we provide complete cost management and transparency.

We specialise in delivering EV chargepoints and integrated managed services across all applications:

Home charging (fleet)

Workplace charging

On-route charging

Hub charging

On-street charging

Destination charging

What are the common charging types?

⚡⚡⚡⚡
Rapid/Ultra Rapid
 Kilowatt 43–350kw
 Charge time: 15–45mins

⚡⚡
Fast
 Kilowatt 7–22kw
 Charge time: 1.5–5 hrs

⚡
Slow
 Kilowatt <7kw
 Charge time: 8–12 hrs

On-route			
Charging hubs			

We take charge of your project, so you don't have to...

With more than 25 years' expertise delivering electrical infrastructure alongside our nationwide asset installation, operation and maintenance capability, our independent hardware-agnostic approach makes us the perfect partner for all your EV charging needs.

Establish

Our customer-specific solution analyses all use cases of your potential charging assets, helping you determine the initial site feasibility and overall business case.

Identify

We identify the most suitable charging technology type for your site(s) and procure it from the manufacturer.

Design

Detailed analysis accounting for infrastructural and electrical network requirements per site allows you to plan and prioritise your charging locations and rollout roadmap.

Funding

Tailored commercial agreements to finance your project, from fully-funded, co-funded, or a managed service.

Install

Our experienced engineers install your new charging hardware and manage the DNO electricity connection.

Operate & Maintain

Provision of full site management, operation and maintenance with all-inclusive over-the air software updates.

Complete Software an easy way to operate chargepoints

Our technology platform gives you freedom to operate with all hardware manufacturers and select the right solution to suit your business. The cloud-based software enables access to live reporting, allowing you to manage chargers across your network, offering a built-in payment and billing system, and the ability to generate and analyse data that can inform your commercial and energy management strategies.

What's included

Fully warranted chargepoints with remote and on-site maintenance

Expert installation service with nationwide coverage

Over-the-air software updates

Best-in-class customer service

24/7 phone support

Specialist account manager as your dedicated point of contact

Why choose us as your EV charging partner?

✔ Full turnkey solution

Everything from initial consultancy, project design, and technology procurement, through to the installation and ongoing operation, management and maintenance of your chargepoint assets.

✔ Independent, hardware agnostic

We are Open Charge Point Protocol (OCPP) advocates, meaning we are completely independent, and not affiliated with any chargepoint makers or suppliers. We're committed to consumer choice, and work only for our customers' best interests.

✔ Innovative software solution

Access to innovative cloud-based software that handles all aspects of your chargepoint management, including billing, payment and data aggregation, all on a single easy-to-use platform. The software allows us to work with any OCPP compliant charger, giving you and your customers the best EV charging experience possible and optimum solutions for your organisation's needs.

✔ Tailored funding options

We can remove the obstacles of investing in your EV charging infrastructure, providing a range of asset funding options alongside engineering expertise to your deliver project.

✔ Energy industry heritage

25 years' experience delivering power infrastructure, energy consultancy, and low-carbon asset management, helping our customers adapt to the changing energy system and embrace the opportunities of sustainability – from cost and carbon reduction to building resilience, reputation, and risk mitigation.
