

# Reduce cost, carbon, and consumption on your journey to net zero

With the UK Government's ambitious 2050 net zero target, businesses are now faced with the urgent challenge of decarbonising their operations.

Through our tailored energy solutions and smart technology, we empower you to strategically decarbonise your energy systems, aligning sustainability goals with cost-efficient strategies.

## Harness the power of energy data

- ✔ Increase profitability
- ✔ Safeguard and enhance the value of assets
- ✔ Lower carbon footprint and contribute to sustainability goals
- ✔ Future-proof against energy price volatility

## Why choose us?

With nearly 30 years' experience in energy management, we understand the unique challenges businesses face. Our innovative solutions and expertise in metering and data, enable us to maximise energy efficiency and cost savings.

Through our longstanding relationships, we've helped our customers reduce:

↓ Carbon by more than **60%**

↓ Consumption by **14%**

↓ Costs by a further **8%**

# Work with a single partner for the entire project...

We guide you through the full lifecycle of energy strategy, counting on significant technical capability, engineering expertise, and experience in delivering energy technologies and carbon reduction strategies.

We currently manage 6 billion data points across more than 5 million energy assets, which enable the measurement of energy performance results.

Our project managers turn opportunities into reality, delivering results that are verified to create a continuous cycle of improvements to help hotels deliver net zero.

Our energy analysts turn this data into insights that form the basis of your energy strategy.

Our experienced consultants use data insights to identify, assess and engineer opportunities for carbon reduction solutions.
